

Kathu Fitness Factory

Case Study

Overview

Type of site Fitness Gym

Number of users 2500

Number of doors 1

Location Northern Cape, South Africa

Client

[The Fitness Factory](#) opened their doors in March 2009. We identified the need for a commercial facility in Kathu, Northern Cape, where the public can come and do a proper workout. We grew tremendously from year one.

Solution

The gym wanted a solution that would ensure people couldn't enter the gym without having a membership. Many gyms use access cards, however, this means others can get into the gym by using another members access card. To combat this, a fingerprint biometric system was recommended.

When a new member joins the gym, their fingerprints are enrolled to the system to give them access at anytime of the day. The members of the gym like the fact

that they don't need to have another card in their wallet! With a fully managed access control system, this gives the gym the ability to limit access at certain times of the day or remove access for individual members.

Even though the the OMA-250 is 2 generations old now, the system is still compatible with the newest equipment should the gym want to expand the access system.

“It is easy to control your members access and eliminates the possibility of people sharing an access card. We would definitely recommend a biometric system.”

John Smith, Kathu Fitness Factory

Products used

-  MorphoManager Software
-  MorphoAccess OMA-250
