

# Assupol

## Case Study

### Overview

Type of site Commercial Building  
Number of users 500  
Number of doors 167  
Location Gauteng, South Africa

### Client

Assupol is a proudly South African insurance company with a history that dates back to 1913.

### Solution

TK Control Systems have installed over 167 biometric readers and 89 iNet door controllers across Assupol's 24 different sites.

All 24 sites are centrally managed by Controlsoft's Identity Access Professional software.

Assupol opted to use the Sigma Lite PLUS Multi readers, because it provides the option for their employees to use biometric access but their visitors or contractors can be issued a temporary access card. This gives Assupol the flexibility of how to manage users within the access system.

Assupol have installed client versions of Identity Access software at selected branches. This is so they can instantly make changes to the access system locally.

Identity Access has no limit to the system size, which gives Assupol a scalable system that can stand the test of time.

“ Identity Access does not require anyone to have strong computer knowledge to understand it. It is easy to work with and it's a very cost effective system.

Tshepo Muhlaba, Assupol IT Security
