

Weston College

Case Study

Overview

Type of site Further and Higher Education
Number of users 9,000
Number of doors 120 between 15 sites
Location Weston-super-Mare, North Somerset

Client

Weston College is an Ofsted rated Good college of further and higher education. It provides education and vocational training to nearly 25,000 learners across the country. "We put the learner first, are entrepreneurial in approach and innovative in our thinking."

Solution

Controlsoft was installed in 2010 and has been steadily expanded across the campus sites over the past 14 years, to now provide access control on 120 doors across 15 sites.

Identity Access is a user-friendly, flexible networked access system, designed to make the management of users and their flow through the

multi-site campus as easily as possible. It's database integration with the college's in-house Student and Staff management software makes it easy to synchronise users' access permission, eliminating data entry into 2 separate systems.

The college find managing users and card permissions very easy with Identity Access
